

# Geolocation databases Dawn of a new era in spectrum management

Heikki Kokkinen Fairspectrum

# The licenses given out today determine the spectrum sharing possibilities of tomorrow

#### **Outline**

- How geolocation based licensing compares to conventional licensing models?
- What is required from incumbents and licensees to enable geolocation?
- When geolocation can help?
- Why and how geolocation should be taken into account also in coming exclusive licenses?

### Geolocation as a regulative tool

Infrastructure investments

### Reporting Incumbents and Flexible Licensees

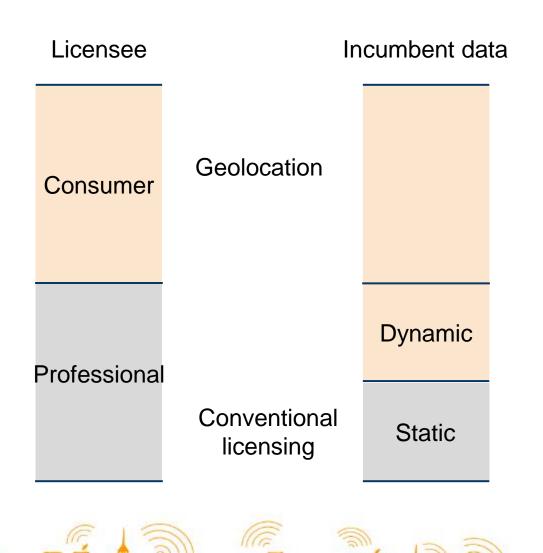

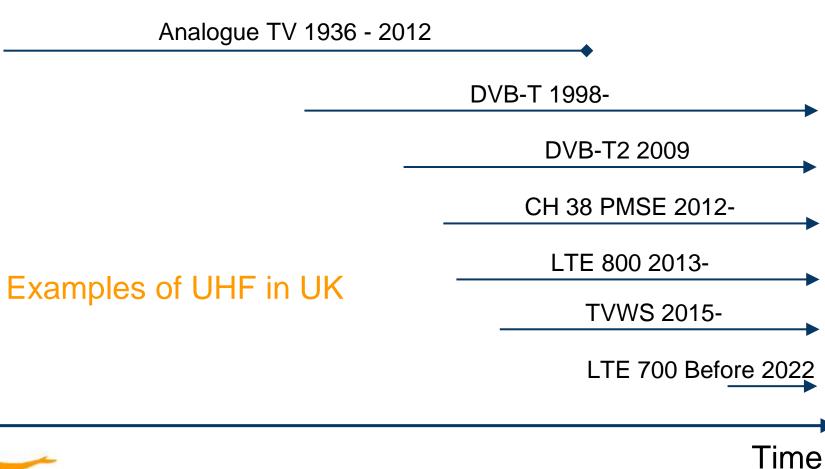

### When geolocation can help?

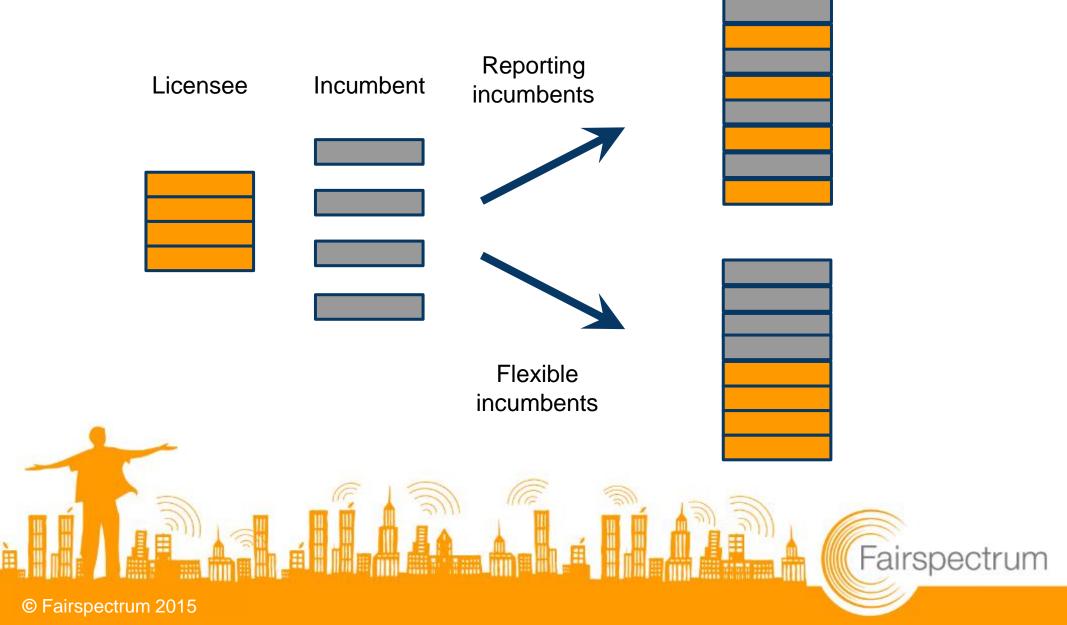

Fairspectrum

#### **Current licensees are future incumbents**

# Reporting allows geolocation, flexibility with geolocation is future proof

### When giving out licenses now and in future

- How can license after-sales market be made more dynamic?
- Could exclusive licenses already today contain a requirement for reporting and flexibility
- Could license applicants of solely exclusive licenses get shorter licenses?
- Could license applicants with Incumbent reporting and Incumbent flexibility get longer licenses with lower cost?
